Cold Oven Checklist

Simple, safe checks for an electric oven that will not heat

Easy Checks

1. **Look at the breaker**
   Reset it once. If it trips again, leave it off.
2. **Check the control lock**
   Make sure the buttons are not locked.
3. **Check demo mode and delayed start**
   Both can stop an oven from heating.
4. **Set the clock**
   After a power cut the control may be waiting.

Look Without Touching

1. **Let the oven cool fully**
   Switch off the breaker before you look.
2. **Check the bake element**
   Note any blister, break or burn mark.
3. **Write down any display message**
   Give it to the technician.

Call A Technician

1. **Nothing heats at all**
   Do not open panels or touch wiring.
2. **Sparks, smoke or burning smell**
   Switch off the breaker and call right away.
3. **Gas smell anywhere in the home**
   Leave the home and call the gas utility from outside.
